PROJECT PROPOSAL: BALVIHAR HINDI SCHOOL OF ATLANTA WEBSITE VHPA Vishwa Hindu Parishad of America

By: Devansh Singh

Purpose: This website is a private portal for Balvihar Hindi School of Atlanta. Children, teachers, and volunteers will work together on one platform. Students will work independently just like in their regular school without depending on parents.

Current Challenges

Student Challenge: All homework sits on parent WhatsApp groups where messages get lost in hundreds of daily chats. Google Classroom access also belongs to parents rather than students. Because of this, students remain completely dependent on their parents to complete assignments.

Parent Challenge: Parents forward reading logs and homework into the main chat. With over a hundred forwarded messages daily, it becomes difficult for parents to see if teachers checked their child's work. Parents must scroll endlessly to locate feedback.

Volunteer Challenge: Volunteers manually record attendance, homework, and classwork across physical notebooks, Excel sheets, and chat groups. This manual effort frequently leads to lost or missed records.

Teacher Challenge: Teachers struggle to track and grade homework inside active chat threads. Identifying missing submissions requires extensive searching. Teachers must also duplicate their work by posting updates across multiple platforms.

Proposed Solution

- Kids access their own student login to view complete and submit school work independently
- Parents view whether teacher checked or marked homework pending with a single click
- Teachers post assignments once and manage all grading in a single organized hub
- Volunteers track attendance and assignments digitally without manual logs
- Secure access roles protect student teacher, volunteer, and admin accounts

Core Benefits

- Students build independence through dedicated individual logins
- Parents eliminate endless scrolling through flooded chat groups
- Teachers track submissions and grade efficiently in one place
- School avoids message clutter across messaging apps
- Volunteers manage records directly through the system
